

Hotel Management Analytics Dashboard - Interview Questions & Answers

Q1. Tell me about your project?

I built an end-to-end Hotel Management Analytics Dashboard using SQL Server and Power BI. I created SQL views, modeled relationships using HotelID, wrote DAX measures, and built interactive dashboards for hotel overview, reviews, and amenities.

Q2. Which tools did you use?

SQL Server, Power BI Desktop, DAX, SQL Views, CSV datasets.

Q3. Why did you use HotelID for relationships?

HotelID is unique. Property names contained duplicates, causing relationship errors.

Q4. Why SQL Views?

To simplify reporting, hide complexity, and improve maintainability.

Q5. What pages are in your dashboard?

Executive Overview, Hotel Recommendation & Review Analysis, Hotel Amenities Overview.

Q6. Which KPIs did you build?

Total Hotels, Cities Covered, Average Customer Rating, Total Reviews, Hotels with Wi-Fi, Pool, Gym, Spa, Parking.

Q7. What DAX functions did you use?

CALCULATE, DISTINCTCOUNT, SUM, AVERAGE, IF, RELATED, CONTAINSSTRING.

Q8. How did you identify amenities?

Created Yes/No calculated columns using CONTAINSSTRING.

Q9. How did you handle duplicate property names?

Used HotelID as the relationship key.

Q10. Why ignore SiteStayReviewRating?

It contained many NULL values, making analysis unreliable.

Q11. Explain star schema.

Explain the concept using your project experience, emphasizing SQL Server, Power BI modeling, DAX, interactive visuals, and business value.

Q12. Difference between measure and calculated column.

Explain the concept using your project experience, emphasizing SQL Server, Power BI modeling, DAX, interactive visuals, and business value.

Q13. Why use slicers?

Explain the concept using your project experience, emphasizing SQL Server, Power BI modeling, DAX, interactive visuals, and business value.

Q14. How do filters work?

Explain the concept using your project experience, emphasizing SQL Server, Power BI modeling, DAX, interactive visuals, and business value.

Q15. What charts did you use?

Explain the concept using your project experience, emphasizing SQL Server, Power BI modeling, DAX, interactive visuals, and business value.

Q16. How do relationships affect visuals?

Explain the concept using your project experience, emphasizing SQL Server, Power BI modeling, DAX, interactive visuals, and business value.

Q17. How did you clean data?

Explain the concept using your project experience, emphasizing SQL Server, Power BI modeling, DAX, interactive visuals, and business value.

Q18. What business insights does the dashboard provide?

Explain the concept using your project experience, emphasizing SQL Server, Power BI modeling, DAX, interactive visuals, and business value.

Q19. How would you automate this in Azure?

Explain the concept using your project experience, emphasizing SQL Server, Power BI modeling, DAX, interactive visuals, and business value.

Q20. Why Power BI?

Explain the concept using your project experience, emphasizing SQL Server, Power BI modeling, DAX, interactive visuals, and business value.

Q21. Difference between SQL and DAX?

Explain the concept using your project experience, emphasizing SQL Server, Power BI modeling, DAX, interactive visuals, and business value.

Q22. How did you optimize the report?

Explain the concept using your project experience, emphasizing SQL Server, Power BI modeling, DAX, interactive visuals, and business value.

Q23. How do KPI cards help?

Explain the concept using your project experience, emphasizing SQL Server, Power BI modeling, DAX, interactive visuals, and business value.

Q24. Explain Top N filter.

Explain the concept using your project experience, emphasizing SQL Server, Power BI modeling, DAX, interactive visuals, and business value.

Q25. What is a SQL View?

Explain the concept using your project experience, emphasizing SQL Server, Power BI modeling, DAX, interactive visuals, and business value.

Q26. What challenges did you face?

Explain the concept using your project experience, emphasizing SQL Server, Power BI modeling, DAX, interactive visuals, and business value.

Q27. How would you improve this project?

Explain the concept using your project experience, emphasizing SQL Server, Power BI modeling, DAX, interactive visuals, and business value.

Q28. How would you publish it?

Explain the concept using your project experience, emphasizing SQL Server, Power BI modeling, DAX, interactive visuals, and business value.

Q29. What is data modeling?

Explain the concept using your project experience, emphasizing SQL Server, Power BI modeling, DAX, interactive visuals, and business value.

Q30. Why use conditional formatting?

Explain the concept using your project experience, emphasizing SQL Server, Power BI modeling, DAX, interactive visuals, and business value.
